PURPOSE

The Regatta Groups corporate responsibility memberships showcase our commitment to fair labour, sustainability, and environmental responsibility. Through the Ethical Trade Initiative we are committed to providing good, safe working conditions to all workers within our supply chain.

The Sustainable Apparel Coalition guides us in reducing our environmental impact, and we use the Higg Index to ensure accountability for our social and ecological practices.

Our involvement with the UNFCCC reflects our active role in global climate change efforts, and all of these partnerships underscore our brand's dedication to responsible business practices, highlighting that ethics and sustainability are at the heart of what we do.

**OUR MISSION:
TO SELL GREAT QUALITY SUSTAINABLE
WORKWEAR, WELL-DESIGNED,
WELL-PRICED AND WELL-MARKETED**

GROUP

PEOPLE

For over 10 years the Regatta Group have supported a primary school in the rural Savar area of Dhaka Bangladesh. The school offers 260 children a safe learning environment, hot meals every day, access to an education and a chance to reach their very best potential.

In our factories in Bangladesh we run a Health and Education Programme, facilitated by a local NGO, educating women on health, hygiene, nutrition and finances in a safe space environment.

Closer to home, we've joined forces with Band of Builders, a registered charity aiding individuals in the construction industry facing life-changing illnesses or injuries.

PLANET

Sustainability is ingrained into our Group operations, and we have committed to net zero emissions by 2050. Our default method of transport is sea vessel when bringing our products to market.

In the UK and Poland our DC operations keep road and truck usage to a minimum through close proximity to port. We support electric vehicles for both company cars and our employees through an EV salary sacrifice scheme.

Our UK operations have solar installations in line with our commitment to reduce emissions.

Through the UNFCCC, our Group completes the CDP report to track and monitor our emissions, proudly achieving grade B last year.

www.cdp.net/en

**"WE ARE COMMITTED TO IMPROVING
OUR RANGE AND INCORPORATING
SUSTAINABLE MATERIALS WITHIN
EVERY PRODUCT BY 2025."**

PRODUCT

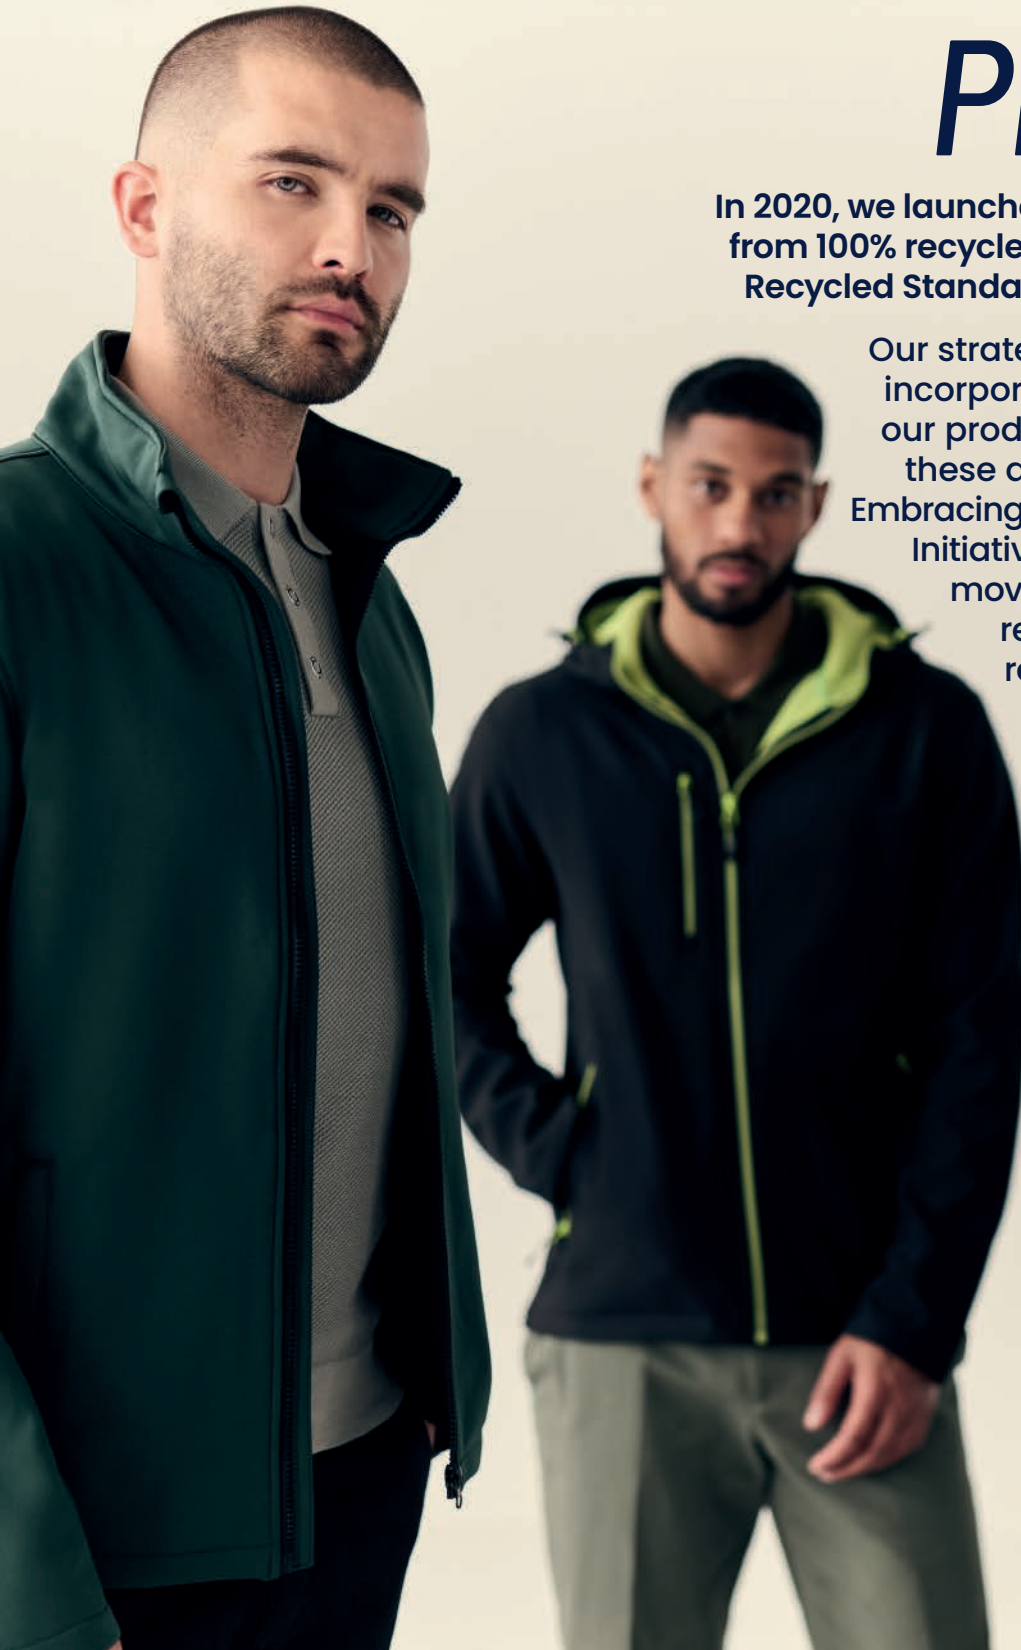

In 2020, we launched a range of products made from 100% recycled fibres, sourced from Global Recycled Standard (GRS) certified fabric mills.

Our strategy has since repositioned to incorporate sustainable fibres into all our products and packaging whether these are synthetic or natural fibres. Embracing the ethos of the Better Cotton Initiative, we contribute to the global movement for sustainable cotton, reinforcing our commitment to responsible and conscientious business practices.

Our dedication to product performance and safety is maintained through our own quality assurance programme, adherence to the REACH regulation, and a rigorous testing procedure on all components used every season.

RATING AND DECORATION GUIDE

We know you need products you can rely on. That's why we have tested our products to the highest standards so you can buy confidently.

Y Resistance to water penetration class (waterproofness)
Y Water vapour resistance class (breathability)
R Readymade garment rain tower test (optional) *
 * X is the value given if the product has not been subjected to this test.

EN343

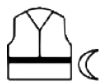

EN343 is the European Standard that specifies requirements and test methods for the materials and seams of protective clothing against the influence of precipitation (e.g. rain, snowflakes, fog and ground humidity). Waterproofness and Water vapour resistance are the essential properties which are tested.

The top number refers to the Waterproof level of which there are 3 classes. Class 3 being the highest level of waterproof protection.

The bottom number refers to the level of Breathability level of which there are 3 classes. Class 3 being the highest level of breathability.

Type A
Daylight

Type B
Dark Conditions

Type C
Daylight, Twilight
and Dark Conditions

EN 17353

Protective clothing – Enhanced visibility equipment for medium risk situations – The standard specifies requirements for enhanced visibility equipment in the form of garments, or devices, which are capable of signalling the user's presence. The enhanced visibility equipment is intended to provide more conspicuous visibility of the wearer in medium risk situations under any daylight conditions and/or under illumination by vehicles headlights or searchlights in the dark.

EN20471

EN20471

EN20471

EN ISO 20471

EN ISO 20471 is the international standard that outlines the requirements for high-visibility workwear for employees in high-risk areas.

EN ISO 20471 is divided into three classes, depending on the risk zone you work in and how well the product is able to protect the employee.

The number refers to the level of class that the garment has been tested to and passed. There are 3 classes for this, class 3 being the highest level of high-visibility workwear with the most fluoro-material and reflectors.

EN14404

EN14404

EN 14404 is the European standard that sets requirements for knee pads to best protect the user's knees. The requirements test different elements of the knee pads to ensure the wearer is comfortable while kneeling for long periods, the ability to absorb impact and stop sharp objects penetrating the area.

RIS-3279-TOM

RIS-3279-TOM

RIS-3279-TOM is a high visibility standard that only applies to the rail industry in the UK. This standard ensures that rail workers on or near the trackside are sufficiently visible to trains approaching at speed or any other traffic.

ID-Reflection

When safety counts our Intelligent Directional Reflection technology will ensure you're seen from all angles. Our angled chevrons allow people to know if you're facing towards or away from them at a glance, increasing safety in low light.

To enable you to display your branding or corporate messages in a workplace or promotional environment, all Regatta products can be either embroidered or printed on.

EMBROIDERY

Perfect for hardwearing products that will be washed frequently. The majority of products can be embroidered but the best results are achieved when using thicker stitching on more durable fabrics such as fleece. Waterproof products can be damaged around the embroidery section, reducing the over-all water resistance.

SCREEN

Ideal for large quantities of product to give a clean crisp finish to the image or logo. Most jackets and softshell products are suitable for screen printing but we don't recommend using this method on fleece or product which can be damaged by high heat.

CUT OUT TAG

All Regatta Professional products are now free from all external branding and have a cut out back neck label.

VINYL

Great for small quantities of branding with less detailed logos or images. The design is applied with heat pressure which makes it suitable for most jackets and softshell products but not for fleece or products damaged by high heat.

TRANSFER

The best option for detailed images or logos giving a direct replication of what is shown on screen on the product. Digital transfers can be applied to most garments but works best on jackets and softshells. We don't recommend digital transfers on fleece or products damaged by high heat.

- We do not recommend embroidering waterproofs as this punctures the fabric and renders it no longer waterproof and invalidates the guarantee
- Heat pressed testing was conducted between 140-170 degrees Celsius
- We recommend always using a teflon sheet when heat pressing to protect the garment
- We recommend always using opaque / blackout vinyls to help avoid dye migration. For best results use dye block when screen printing
- Always seek expert advice before decorating garment
- Regatta takes no responsibility for the decoration of garments or any resultant damage
- All lined garments have decoration access

TECHNICAL GUIDE

ISOTEX 10000 ISOTEX STRETCH 10000

Our most advanced wet weather protection offering waterproof, breathable and windproof performance for active use.

A waterproof membrane prevents external moisture leaking in to a minimum of 10,000mm water column, known as hydrostatic head.

A breathable membrane allows moisture vapour to escape from the inner garment with a minimum of 10,000g of water vapour passing per square meter of fabric per 24-hour period (g/m²/d).

Durable water repellent technology applied to the outer fabric repels moisture and prevents it gathering on the surface of the garment.

* Stretch yarns give greater range of movement for active use.

WATER REPELLENT

Water repellent garments use our durable water repellent technology to repel moisture and prevent it gathering on the surface of the garment. This involves a coating applied to the outside of the fabric which causes water to bead and roll off the surface when it comes into contact with the fabric.

Water repellent does not mean waterproof, but it is the first layer of protection making garments perform better outdoors.

Regatta's durable water repellent technology has been PFC free (Perfluorinated Compounds) as of September 2020.

THERMO GUARD

Thermoguard insulation traps air in its synthetic sheets of fibres for warmth and comfort. Quick drying and water-repellent, its easy care properties will keep you warm even when wet.

HYDRA FORT 5000

Our original wet weather protection offering waterproof and windproof performance for everyday outdoor use. A waterproof membrane or coating prevents external moisture leaking in to a minimum of 5000mm water column, known as hydrostatic head.

Durable water repellent technology applied to the outer fabric repels moisture and prevents it gathering on the surface of the garment.

SOFTSHELL XPT SOFTSHELL

A softer more versatile alternative to a waterproof outer shell.

Our 2-layer bonded Softshell fabric comprises; a tightly woven outer fabric with water repellent and windproof performance, and a soft breathable inner fabric for comfort and warmth.

Our 3-layer softshell XPT fabric includes a waterproof and breathable membrane sandwiched between the fabric layers for full weatherproof performance.*

*As 3-layer fabrics have a membrane, they are waterproof and windproof, though garments do not feature taped seams so they can only be labelled as water repellent.

WARM LOFT

Warmloft insulation is our premium synthetic down. It traps air in its clusters of loose lofty fibres and guarantees to keep you warm.

Its highly compressible and soft to touch with quick dry and water repellent properties to keep you cosy even when wet.

WATERPROOF TAPED SEAMS

Our waterproof garments have a of tape applied on the inside of the garment along the stitched seams.

The tape has the same waterproof performance as the fabric its applied to, and creates a waterproof seal over any stitching holes that are created when the garment is sewn together.

Taped seams are the final element allowing us to label our garments as 'fully waterproof' paired with waterproof membranes and our durable water repellent technology.

WINDPROOF

Windproof fabrics are generally assembled from multiple layers, with a tightly woven construction to prevent air penetration. The layers and the construction retain heat offering insulation against gusts of wind, whilst still allowing breathability.

BAMBOO PROTECT

Bamboo fibres have natural antibacterial properties, which help prevent odour and keeps clothing fresh for longer periods.

SUSTAINABLE COTTON

Our cotton is sourced through Better Cotton, the world's leading cotton sustainability initiative.

Their mission is to help cotton communities survive and thrive while protecting and restoring the environment.

COOLWEAVE

Made from 100% polyester with a special airflow construction to keep you cool and comfortable.

It quickly draws moisture away from the skin to the exterior of the fabric where it evaporates.

Reinforced triple stitched seams used to give extra strength to garments that need to work hard.

Our hardwearing and reliable fabric to withstand the everyday wear and tear of the workplace.

Durable and abrasion resistant yarns and water repellent technology to perform in the toughest conditions.

Cordura® fabric offers industry renowned tear and abrasion resistance with long-lasting durability, ideal for areas of high use where extra protection is required.

BRITELIGHT

Our Brite Light garments feature torch technology in the sleeve, which displays three different brightness settings, lighting the way when visibility fades.

Operated via a push button the torch is easily detachable to allow garment washing, & rechargeable via USB. A full charge on the maximum setting (80 lumens) will last for 2 hours, whilst the lowest setting will work for 8 hours.

SYMMETRY FLEECE

Comfort, quick drying, fleece technology with antipill finish making it durable and long lasting.

EXTOL STRETCH

Our stretchiest fabric technology, with bounce back recovery.

This ergonomic, quick drying fabric prevents windchill, providing comfort and freedom of movement for active wear.

RFID

Our RFID protective pocket lining technology contains metal fibres which interfere and shield signals from scanning devices.

THERMO-REFLECT

Our thermoreflex technology uses tiny silver dots to reflect body heat back to the wearer. Found in our premium jacket linings it offers the ultimate in heat retention.

THERMOGEN

Our heated technology garments are lined with an electronically powered copper heating zone, powered by a battery pack which sits within an inside pocket.

On a full charge, you can expect up to two hours worth of continuous heating. The battery is USB powered and is sold separately.

EXTENDABLE HEM

Our innovative hem feature, allows users to easily extend the length of the garment by offering two options: a standard size and a length that can be extended up to 5 cm.

HIGH REACH

Our high reach technology includes an underarm gusset construction which allows for the maximum range of movement and unrestricted flexibility. Garments that have you covered on the job.

Scan the QR code to find out more about our sustainable fabric updates.

For more information and to register your guarantee, please enter your details on our website at: regattaprofessional.com

Men's Sizing Chart

All our products are designed to enhance every adventure you embark on, that's why we take care to make sure they fit to you rather than you fitting the product. Our size chart below shows a guideline to the standard body measurements that we work to. Measuring your body accurately will help to determine what size Regatta Professional kit is best for you.

Regatta Professional Measuring Guide

The fit of your clothes depends on the cut/style and design of your garment. Our garments will vary in actual size as we allow for ease of fabric over the body. Measure your body accurately to determine what size clothes you would be best buying.

A CHEST:

Measure the chest at the fullest part placing the tape under the arms.

B WAIST:

Measure around the waist at the height at which you would normally wear your trousers.

C INSIDE LEG:

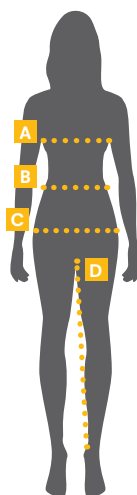

Measure from the crotch to where your trouser leg is normally worn at the ankle.

26"	152 - 158 cm	68 - 70 cm	164
28"	158 - 164 cm	70 - 72 cm	176

Regatta Professional Kids General Sizing Guidelines

Our children's clothes are designed to allow room for growth. Sometimes the height measurement is a better guide than the age in choosing the correct size for your child.

A HEIGHT:

Measure from a level floor to the top of the head.

B CHEST:

Measure the chest at the fullest part placing the tape under the arms.

C WAIST:

Measure around the waist at the height at which you would normally wear your trousers.
