**Breathable-Permeable to water vapour**

Functional textiles must have the ability to transport moisture from the skin to the fabric surface as fast as possible. Permeability shows how much steam in grams can evaporate on a surface of 1 m<sup>2</sup> within 24 hours. The higher this figure, the more breathable the textile is.

**Water column from 1.500 mm**

The ability to withstand water pressure without moisture penetrating into the material is given by the water column (mm). The minimum standard is a water column of 1,500 mm.

**Taped seams**

To avoid moisture penetrating into the fabric, seams and stitches can get taped. Taped seams are 100 % water-proof.

**Reflex**

IQseen is the brand for high reflective materials. With an even distribution around the body this material will make the wearer visible of a distance up to 160 meters. IQseen silver reflective materials fulfill the requirements of the EN 471. Millions of glass beads reflect the light back to its source. The wearer of the product becomes more visible and the motorist has more time to react. This makes the difference! Clearly visible!
